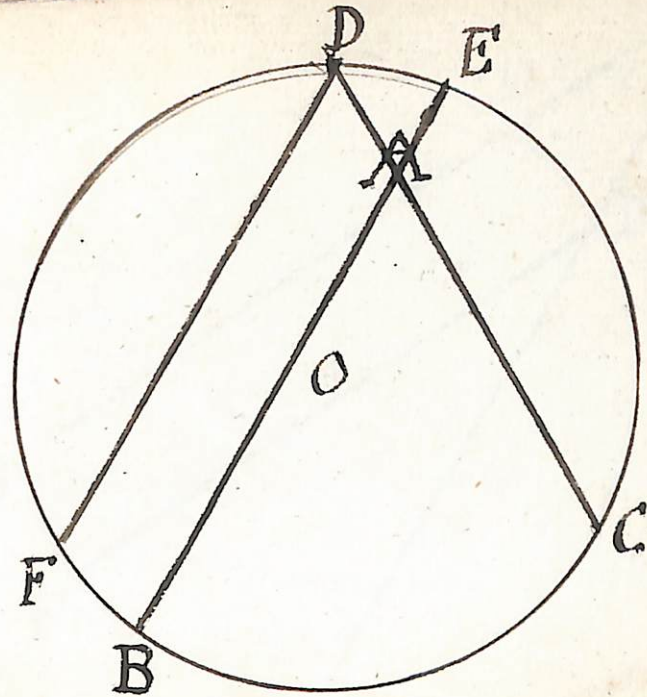

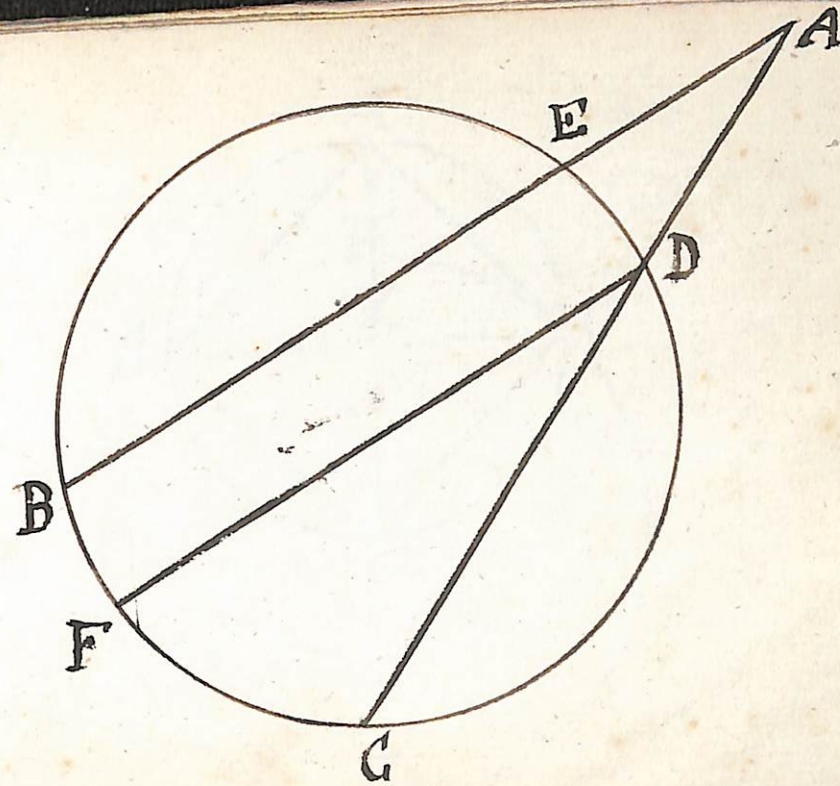

Fig. XLI,

A geometric diagram of a sphere. A large circle represents the sphere's outline. Inside, a smaller circle represents the equator. Points are labeled as follows: A at the top pole, O at the bottom pole, B at the left point where the equator meets the sphere's outline, and C at the right point. A vertical line segment connects A and O, passing through point F. A horizontal line segment connects B and C, passing through point X. Dashed lines connect B to O and C to O. Solid lines connect A to B, A to C, and A to O. The diagram illustrates the geometry of a sphere and its internal lines.
